

PARIT TRAY

An advanced tray for drip irrigation with its integrated channels (*parit*) for water distribution

Specifications & Features

- 1) Each tray has 4 primary channels from which a secondary channel issues to each cell.
- 2) Water is supplied through drip tapes sitting in the primary channels and distributed to cells via secondary channels.
- 3) The system eliminates the need for small diameter tubing and tiny emitters that are prone to blockages.
- 4) Reflective tray surface reduces heat stress on plants.
- 5) Increased space between cells permits some delay in transplanting.
- 6) Stronger and more durable.

Advantages of Parit Tray System

- 1) Lower cost per tray cell
- 2) Reduced setup and maintenance costs
- 3) Precision placement resulting in reduction of
 - Water wastage
 - Weed problem
 - Fertilisers and pesticides wastage
- 4) Allows for watering using automated controlling device
